

### **Event Description, including targets groups and objectives**

The conference is a Multiplier Event within the Erasmus+ project Education for resilience and sustainability. The participants in the conference are experienced teachers and educators from all over the world. They will be chosen to broaden the picture of how Storyline can be developed and used to be successful regarding learning for sustainable development. We will present an update of the findings from the project and get various views from the different participants in order to develop the project further.

Prior to the conference, the teachers in all participating countries included in the project, have worked with Storyline as a method for working with sustainable development and resilience. These experiences form a base for participating in the conference, and the teachers from the project will present their work at the conference. Through the opportunity of presenting their own practice, the teachers have to focus and reflect in a critical way on their own practice, which we consider as a crucial learning process for this project.

The goal with the conference is to provide practising teachers and scholars an opportunity to discuss their own teaching practice together with teachers and scholars from around the globe, in terms of both proven and best practice experiences, and current research. The participants' own practice will be discussed and analysed during the conference discussions.

Based on these experiences, we will continue the project and analyse how to move forward in our respective countries to achieve the overall objectives of the project. Since the project include researchers from three different universities to study the outcome from Storyline work in schools, our intention is to spread and discuss the result of the studies with students, teachers and in the field of education research, as a way to produce new knowledge of teaching and learning processes.

The findings will also be discussed with experts on the Storyline method, and be published through video films, topic outlines and be shared on this website. We see the conference as an essential event to develop, discuss and spread the process, findings and results of the project. Therefore, we plan to gather interested participants from different countries, for a special conference event: Roundtable discussions and group interviews. Through this event we may challenge the common way of planning and conducting Storyline work in schools, in order to develop the Storyline approach as such, for example how to create Storyline outlines. We also want to emphasise the sustainability perspective here, and how to combine different views on education for sustainable development in schools.

This event may itself lead to new outputs, such as conference proceedings, both as texts and video recordings to share. The conference is Friday 25, Saturday 26 and Sunday 27 March 2022. We also plan for school visits on Friday 25th. All keynote speakers and conference presentations will link to the theme for the conference, which is sustainability and resilience. Intellectual Outputs Covered The project will contribute to the Storyline community in various ways. We plan for reaching both the practitioners at schools and scholars at universities, and to build links between these two fields. In short, the outputs will be: - Research articles, presenting the findings from the research studies. - Academic presentations at the Storyline conference. - Video films, showing several teaching and learning approaches based on the Storyline approach, from schools included in the project.

With the support of the  
Erasmus+ Programme  
of the European Union

Storyline Sweden, The University of Gothenburg, Backatorpsskolan and partners in Erasmus+ project welcome you to Gothenburg. Our partners in the Strategic Partnerships for school education are: Østfold University College, Åbo Akademi University, NAV Sweden, Katarinaskolan, The Primary School OS Ob Rinzi, Storyline International
